

1. Vision

DecisionMesh is building the AI Control Plane for enterprises — a unified layer to orchestrate, govern, and optimize decisions across multiple AI systems.

2. Problem

Enterprises today face fragmented AI adoption, inconsistent decisions, lack of governance, vendor lock-in risks, and no unified control layer.

3. Solution

DecisionMesh introduces an intent-driven architecture where decisions are centrally evaluated using rules, context, and historical learning before execution.

4. Product

A platform that accepts intents, routes across AI vendors, applies governance policies, evaluates outcomes, and continuously improves decisions.

5. Architecture

• Intent API Layer • Decision Intelligence Engine • Governance & Policy Layer • Vendor Integration Layer • Observability & Audit Logs

6. Differentiation

Unlike workflow tools, DecisionMesh acts as a decision brain combining reasoning, evaluation, and governance.

7. Market Opportunity

AI adoption is exploding, but enterprises lack control. DecisionMesh defines a new category: AI Control Plane.

8. Business Model

• SaaS subscription • Usage-based pricing • Enterprise licensing • Future marketplace ecosystem

9. Go-To-Market

Start with AI-first startups and mid enterprises → expand into regulated industries (finance, healthcare).

10. Demo Story

A user submits an intent → system evaluates vendors → applies rules → selects optimal output → logs decision → improves future decisions.

11. Roadmap

• Autonomous decision optimization • Learning feedback loops • Decision marketplace • Industry-specific templates

12. Vision for Scale

Become the standard control layer for enterprise AI — like Kubernetes for decisions.
